

Department of Computer Science and Information Technology

CSCI426: Advanced Web Programming

Project Phase 1

Objective

The goal of this project is to enable students to:

- Apply web design and development principles using reactjs as a frontend.
- Understand responsive web design and UI/UX design.
- Demonstrate version control and deployment skills using Git and GitHub.

Project Description

You are required to design and develop a frontend functional web application that solves a real-world problem or automates a useful task.

You are allowed to work in groups of 2 at most or alone

You may choose one of the following themes (or propose your own with approval):

1. Online Bookstore – Allow users to browse, search, and purchase books.
2. Student Portal – Manage student profiles, courses, and grades.
3. Event Management System – Create, manage, and register for events.
4. Restaurant Ordering System – Menu display, cart, and order tracking.
5. Dr. Online - allow doctors and patients to register as users; Doctors are able to update patients with recent studies for a given sickness, Doctors and patients together to discuss the diseases in generally, post topics for discussions.
6. HealthTrack – Fitness and Wellness system, A personal wellness tracking website that helps users log daily activities, meals, and exercise routines.

Functional Requirements

Your project must include the following:

Frontend:

1. ReactJS (you may use Bootstrap or Tailwind CSS).
2. At least 5 pages (Home, About, Services/Features, Contact, and one dynamic page).
3. Responsive design (works on desktop and mobile).

Technical Requirements

- Use Git for version control (must show commit history).
- Host the project on GitHub Pages, Vercel, or Netlify (frontend).
- Include a README.md file with:
 - Project description
 - Setup instructions
 - Screenshots of the UI

Deliverables

1. Project Report (PDF):
 - Title page
 - Abstract
 - System design.
 - Technologies used
 - Code snippets (key parts only)
2. Source Code Repository Link (GitHub):
 - Must include all code, assets, and documentation.

Evaluation

Evaluation Criteria Component	Description	Marks
UI/UX Design	Layout, responsiveness, creativity	60
Code Quality	Readability, documentation, version control	20
GITHUB deployment project		10
Report & Presentation	Documentation, clarity, visuals	10

Submission Guidelines

- Submit the project report PDF and the GitHub link via google classroom.
- Late submissions will acquire a penalty of 10% per day (max 3 days late).
- Each group must submit a group contribution statement.

Academic Integrity

All work must be original. Plagiarism or use of pre-built templates without citation will result in a zero grade.
