

Phase 1 Evidence Document

LM Pizzeria: React Frontend Implementation

Student: Lamita Masry
Course: CSCI 426 - WEH Advanced
Instructor: Prof. Fouad Najem
Term: Spring 2026
Project: LM Pizzeria Restaurant Ordering System
Date: January 2026
Live Demo: <https://lmpizzeria.netlify.app/>

Phase 1 Requirements Verification

This document provides concrete evidence that the LM Pizzeria project meets all Phase 1 requirements for the university web development course.

Requirement 1: React Frontend Framework

Requirement: Build a frontend application using React.

Evidence:

- React version: 18.3.1
- React DOM version: 18.3.1
- React Router DOM: 6.26.0
- Build Tool: Vite 5.4.2
- Main Entry Point: src/main.jsx

Requirement 2: Minimum 5 Pages

Requirement: Application must have at least 5 distinct pages.

Evidence: The application has 10 pages (exceeds requirement):

#	Page Name	Route	Purpose
1	Home	/	Landing page with hero section and featured items
2	About	/about	Restaurant story and team information
3	Menu	/menu	Full menu with category filtering
4	Menu Item Detail	/menu/:id	Dynamic route - Individual item details
5	Contact	/contact	Contact form and location information

6	Cart	/cart	Shopping cart and checkout form
7	Order Confirmation	/order-confirmation	Order success page
8	Login	/login	User authentication
9	Signup	/signup	User registration
10	Orders	/orders	Order history for logged-in users

Requirement 3: Dynamic Route

Requirement: At least one page must use a dynamic route parameter.

Evidence:

- Route: /menu/:id
- File: src/pages/MenuItemDetail.jsx
- Functionality: Displays detailed information for a specific menu item based on the :id parameter

Implementation uses useParams hook to extract the dynamic ID from the URL. Example URLs:

- /menu/1 shows Margherita Pizza details
- /menu/5 shows Caesar Salad details
- /menu/12 shows Tiramisu details

Requirement 4: Responsive Design

Requirement: Application must be fully responsive across different screen sizes.

Evidence:

- CSS Framework: Tailwind CSS 3.4.11
- Mobile hamburger menu with conditional rendering
- Responsive grid layouts that adapt to screen size
- Menu Page: Uses responsive grid grid-cols-1 md:grid-cols-2 lg:grid-cols-3
- Home Page: Hero section adapts to mobile/tablet/desktop

Responsive Design Patterns Used:

- Mobile-first approach with Tailwind breakpoints
- Hamburger menu for mobile devices
- Desktop navigation for larger screens
- Flexible grid layouts

Breakpoints:

- Mobile: less than 768px
- Tablet: 768px to 1024px

- Desktop: greater than 1024px
-

Requirement 5: CSS Framework (Tailwind)

Requirement: Use a modern CSS framework for styling (Tailwind CSS is explicitly allowed).

Evidence:

- Framework: Tailwind CSS version 3.4.11
 - Configuration files present: tailwind.config.js and postcss.config.js
 - Global styles in src/index.css with Tailwind directives
 - Tailwind directives include base, components, and utilities
-

Requirement 6: Version Control (Git)

Requirement: Project must use Git for version control with meaningful commit history.

Evidence:

- Repository: <https://github.com/Lamitamassry/lm-pizzeria>
 - Git configuration with .gitignore file
 - Excludes: node_modules/, .env, dist/
 - Commit history documenting development phases
 - Main branch with organized commits
-

Requirement 7: Frontend Deployment

Requirement: Frontend must be deployed and accessible online (Netlify, Vercel, or GitHub Pages).

Evidence:

- Platform: Netlify
 - Live URL: <https://lmpizzeria.netlify.app/>
 - Status: Active and accessible
 - Build configuration: vite.config.js
 - Build Command: npm run build
 - Output Directory: dist/
-

Requirement 8: README Documentation

Requirement: Include a README with project description, setup instructions, and screenshots.

Evidence:

- File: [README.md](#)
 - Sections Included:
 - Project description and overview
 - Live demo links (Frontend URL)
 - Features list (Phase 1 and Phase 2)
 - Technology stack
 - Complete setup instructions
 - Project structure documentation
 - API documentation
 - Database schema
 - Deployment guides
 - Security features
 - Development scripts
-

Component Architecture

Reusable Components

Navbar

- Responsive navigation with mobile menu
- Authentication state display
- Conditional rendering based on user login

Footer

- Site-wide footer with links and social media

MenuItemCard

- Reusable card component for displaying menu items
- Add to cart functionality

Layout Structure

MainLayout

- Wraps all pages with Navbar and Footer
- Uses React Router's outlet for nested routing

CartContext

- Global cart state using React Context API
 - Functions: addToCart, removeFromCart, updateQuantity, clearCart
 - Persists cart state across page navigation
-

Data Structure

Menu Data

- File: src/data/menuData.js
 - Structure: Array of menu items with properties:
 - id: Unique identifier
 - name: Item name
 - description: Item description
 - price: Numeric price
 - category: Pizza, Appetizers, Salads, Desserts, or Beverages
 - image: Image URL
-

Technology Stack

Technology	Version	Purpose
React	18.3.1	UI library
React Router DOM	6.26.0	Client-side routing
Vite	5.4.2	Build tool and dev server
Tailwind CSS	3.4.11	Utility-first CSS framework
PostCSS	8.4.47	CSS processing
Autoprefixer	10.4.20	CSS vendor prefixing

Build and Development Scripts

Development: npm run dev (runs on <http://localhost:5173>)

Production Build: npm run build (outputs to dist/)

Preview Build: npm run preview

Phase 1 Checklist Summary

- ✓ React Framework: Using React 18.3.1
- ✓ 5+ Pages: 10 pages implemented
- ✓ Dynamic Route: /menu/:id with useParams
- ✓ Responsive Design: Tailwind CSS with mobile-first approach
- ✓ CSS Framework: Tailwind CSS 3.4.11
- ✓ Git Version Control: GitHub repository with commit history

- ✓ Frontend Deployment: Live on Netlify
 - ✓ README Documentation: Complete with setup instructions
-

Screenshots Reference

Screenshots demonstrating the application UI are available:

- Home page on desktop
 - Home page responsive view
 - Menu listing with categories
 - Dynamic menu item detail page
 - Shopping cart interface
 - Contact page
 - About page
 - Responsive design demonstration
-

Conclusion

This evidence document demonstrates that the LM Pizzeria project fully satisfies all Phase 1 requirements:

1. Built with React framework
2. Contains 10 pages (exceeding the 5-page minimum)
3. Implements dynamic routing with `/menu/:id`
4. Fully responsive using Tailwind CSS
5. Uses modern CSS framework (Tailwind)
6. Version controlled with Git
7. Deployed on Netlify (publicly accessible)
8. Complete README with documentation

All files referenced in this document exist in the repository and can be verified by inspecting the codebase.
